DETAILED ACTION

- I. Claim 13-14, drawn to Compounds, compositions and use, G is other than sugar or oligopeptide, classified in class 540; 514 subclass 200; 210.02.
- II. Claims 5, 8, 11 drawn to Compounds, compositions and use, G is sugar residue, classified in class 536; 514, subclass 17.4; 25, 32
- III. Claims (none), drawn to Compounds, compositions and use, G is oligopeptide, classified in class 930, subclass 280.

Claims 1-4, 7, 10, 12, 15-20 link inventions I and II and III.

Claim 6, 9 link inventions II and III

These claims are examined to the extent that they read on the elected invention.

Compounds containing both sugar and oligopeptide groups are treated as sugars.

The inventions are distinct, each from the other because of the following reasons: Sugars and peptides are considered to be clearly structurally very dissimilar to the other more ordinary organic groups recited. Sugars and peptides are considered separate areas within organic chemistry and within pharmaceuticals. Restriction for examination purposes as indicated is proper because all these inventions listed in this action are independent or distinct for the reasons given above and there would be a serious search and examination burden if restriction were not required because one or more of the following reasons apply:

- (a) the inventions have acquired a separate status in the art in view of their different classification;
- (b) the inventions have acquired a separate status in the art due to their recognized divergent subject matter;

- (c) the inventions require a different field of search (for example, searching different classes/subclasses or electronic resources, or employing different search queries);
- (d) the prior art applicable to one invention would not likely be applicable to another invention;
- (e) the inventions are likely to raise different non-prior art issues under 35 U.S.C. 101 and/or 35 U.S.C. 112, first paragraph.

In this case, (a) is clearly true.

Applicant is advised that the reply to this requirement to be complete must include

- (i) an election of a invention to be examined even though the requirement may be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse. Traversal must be presented at the time of election in order to be considered timely. Failure to timely traverse the requirement will result in the loss of right to petition under 37 CFR 1.144. If claims are added after the election, applicant must indicate which of these claims are readable on the elected invention.

If claims are added after the election, applicant must indicate which of these claims are readable upon the elected invention.

Should applicant traverse on the ground that the inventions are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing

the inventions to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

A telephone call was made to Phil Hansen on 6/18/2009 to request an oral election to the above restriction requirement, but did not result in an election being made. A written restriction was requested.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
